

SBR-SD 25

Deshusker

Hulling is the process of removing husk from paddy. This is achieved by the gentle action of the rubber rolls applied to the paddy rotating with different speed. This is possible through a new machine designed for optimum performance, durability and sanitation. The Rubber Rolls Husker reduces rice breakage, has great aspiration efficiency and considerably improved rubber roll life when compared to traditional machines.

Paddy husker + Aspirator	Capacity t/h	Power kW	Aspiration m ³ /1'	Weight Kg
SBR - SD 25	3,5-5,5	7,5	3	490
SBR-SR 25	3,5-5,5	4	3	900
